

Product Name :
Automatic Flexure Tension Machine

Product Code :
CHINAELABC2680026

Description :

Automatic Flexure Tension Machine

Technical Specification :

It consists of a beam loading system with a travelling weight driven by an electric motor providing a constant increase in load throughout the test.

This machine is used for the flexural strength determination of cement specimens 40.1x40x160 mm and tensile tests on cement briquettes.

The machine is designed to accept either flexural or tensile attachments which have to be ordered separately as accessories.

Automatic flexure/tension machine for cement specimens. 5000 N cap. 230 V, 50 Hz, 1 ph.

Automatic stop at failure

Accepts flexural or briquette specimens

Wattage: 40 W

Constant rate of loading

Dual range

Single lever loading assures high accuracy

Dimensions: 510x1050x720 mm

Weight approx.: net 52 kg
