Buoyancy Balance

Technical Specification :

A mechanical lifting device is used to raise the water tank through the frame height immersing the specimen suspended below the balance fixed on a cradle.

The buoyancy balance system developed by us consists of a rigid support frame.

Incorporating a water tank mounted on a platform.

The sample is weighed in air and in water to calculate the density of fresh concrete.

The balance may also be used as a standard weighting device, thus providing a versatile and comprehensive weighing system in the laboratory.
