

Product Name :
Compression Testing Equipment Electrically Cum Manually
(Hand) Operated

Product Code :
CHINAELABC2650057

Description :

Compression Testing Equipment Electrically Cum Manually (Hand) Operated

Technical Specification :

In the Electrically Operated Pumping Units load gauges are fitted with micro switches to switch-off the motor when the load approaches the maximum capacity of the gauge, avoiding any over loading.

Compression Testing Equipment Electrically cum Manually (Hand) Operated. The loads are measured on Bourdon tube type load gauges which are calibrated against certified proving rings.

The load gauges are fitted with a maximum load pointer.

The electrically operated pumping units are provided with a control knob to adjust the pace rate which can be effectively controlled by an experienced operator during the course of testing, observing the progress of the load gauge reading.

The electrically operated pumping units are also fitted with hand operated pump.

The range we offer includes Manually (Hand) Operated, Semi Automatic Compression Testing Equipment, Electrically Cum Manually Operated equipment and more.

These strength testing equipment are extremely handy and are easy to use for testing cement, concrete and mortar cubes.

Relays are incorporated so that the motor does not restart on its own after a power breakdown.

We lay utmost importance on equipment design and construct with emphasis on ease of operation.
