

Product Name :
Vapour Absorption Refrigeration Trainer

Product Code :
CHINAELABC2560004

Description :

Vapour Absorption Refrigeration Trainer

Technical Specification :

The basic principle is demonstrated in the experimental unit with the example of an ammonia-water solution with the ammonia acting as refrigerant.

This systems use the principle of liquids evaporating already at low temperatures when pressure is reduced. Absorption refrigeration systems operate using thermal energy e.g. from industrial waste heat or from solar collectors.

In process technology systems the resulting waste heat can be used for cooling.

In small mobile systems, such as a camping refrigerator or minibar in a hotel, the required heat is generated electrically or by gas burner.

Another benefit of absorption refrigeration systems is their silent operation.

FEATURES:

- Absorption refrigeration system and its main components
- Demonstrate the basic principle of an absorption refrigeration system
- Operating behavior under load
- To find out Refrigeration effect
- To find out coefficient of performance

SPECIFICATION:

- Auxiliary gas: hydrogen
- Electric heater: 125W
- Evaporator heater, adjustable: 50W

Working medium: ammonia-water solution

Measuring ranges :

Temperature: 4x -80...180°C

Power: 0...150W

Required for operation :

230V, 50Hz, 1 phase

230V, 60Hz, 1 phase
