

Product Name :

Mud Balance

Product Code :

CHINAELABC2680044

**Description :**

Mud Balance

Technical Specification :

Mud balance testing equipment is a vital testing apparatus that allows the site professionals and lab technicians to assess the density of the slurry and liquidized mixes that are used in construction activities.

The apparatus has –

A stainless steel beam at one end of which there is a steel cup with a lid on it.

An overflow vent is attached with the cup.

A cursor to slide on the calibrated beam.

The beam rests on a fulcrum while another counter weight is attached.

Specifications:

Reading of the specific gravity of the semi liquid is thus derived instantaneously.

Simple to use, this apparatus offers on the spot measurement of density and this in turn helps the engineers to make the relative comparisons for the purpose of project execution.
