

**Product Name :**  
Slotted Tube Sampler for Bulk Cement

**Product Code :**  
CHINAELABC2680050

**Description :**

Sampling - Slotted Tube Sampler for Bulk Cement

**Technical Specification :**

These samplers are used for sampling of cement from wagons and from ship's hold.

The sampler consists of two telescopic brass tubes with slots along their lengths. The slots can be opened for collecting the sample and then closed by rotating the inner tube. The tube has a conical end for easy penetration. These samplers are between 1.5 to 1.8 m long with about 35 mm O.D for sampling from ship's hold and can be used up to 2m depth.

These are about 60 cm in length when required to be used for sampling from wagons.
